

DO NOT USE STINGER OR ANY OTHER HYPER VELOCITY AMMO.

DO NOT USE REMINGTON "THUNDERBOLTS"

YOU MUST USE HIGH VELOCITY AMMO, STANDARD VELOCITY AMMO WILL NOT WORK, EXCEPT AS LISTED BELOW.

Recommended ammo for the following kits:

Over the years CCI 40 grain round nose MiniMags have proven to be the most consistent and reliable brand of ammo. Other brands tend to vary from one production run to the next, they may work fine one time, however, the next time you buy them you start experiencing feeding and cycling problems. If this happens, it's more likely the ammo causing the problem and not the kit, in this situation you should try another brand of ammo.

17-22, 19-23, 26-27 - CCI Mini Mags (40 grain round nose **not hollow points**), Remington Golden Bullets 550/525 round Bonus Pack, CCI Blazers, Federal AutoMatch.

20-21, 29-30 – CCI Mini Mags (40 grain round nose **not hollow points**), Remington Golden Bullets 550/525 round Bonus Pack, CCI Blazers.

NOT Recommended: CCI MiniMags hollow points, any Winchester ammo, any Federal ammo other than AutoMatch, Remington Thunderbolts, CCI Stinger or any other hyper velocity ammo.

NOTE: The Remington Golden Bullets work quite well, however, you will get more light strikes and inconsistent loads than with the other recommended ammo.
